

PULLMAN-HOLT

Introducing the EvacHEPA-TT with Tool Trigger

Pullman-Holt is pleased to announce a new HEPA Vacuum, designed specifically to be used with power tools and dust management. The model EvacHEPA-TT has a “Tool Trigger” feature allowing the operator to turn the vacuum on or off through the power tool. Stricter worker and environmental regulations are requiring tradesmen who cut and grind concrete and masonry materials to control dust. Collecting and containing dust increases worker and power tool productivity, extends life of the abrasives and reduces clean-up time and expense.

Features:

- **Commercial grade, long-life 2HP motor** - exceeds airflow and pick-up of vacuums purchased from home improvement stores.
- **Blow molded rectangular shaped canister** - low center of gravity, no tipping and easy handling, transporting and storage.
- **Offset hose inlet** - provides cyclonic separation of dust. Keeps dust away from prefilter, extends running time.
- **Tested and certified HEPA filter** - oversized HEPA filter with plenty of media to handle high airflow.
- **“Never Clog” Dacron filter bag** - self-cleaning, maximizes airflow and prevents interruptions when picking up large volumes of dry, fine dust.
- **Conveniently mounted filter cleaning knob** - allows operator to purge filter clean in seconds without removing motor head.
- **50-foot power cord with storage strap** - operates in a wide area without changing electric outlets. Convenient storage on motor head.

Technical Specifications:

Type:	Dry
HEPA Filter:	Individually tested and certified to have a minimum efficiency of 99.97% at .3 microns
Pre-filter:	“Never Clog” Dacron filter bag
Filter Cleaning System:	Manual agitation rod mounted on motor head
Capacity:	15 gallon
CFM:	110
Waterlift:	105”
Power cord:	50-feet
Accessories:	10' x 1.5” crushproof hose (included) 4' x 1” power tool connection hose (included).
Product Code:	B100581
Weight:	52 lbs
